

Omer Teomim

DevOps Engineer

omerteomim@gmail.com | 0544802218 | <https://github.com/omerteomim> | <https://linkedin.com/in/omerteomim>

Professional Summary

DevOps Engineer with expertise in cloud infrastructure, automation, and continuous integration/continuous deployment (CI/CD) pipelines. Proven track record in designing, implementing, and maintaining scalable cloud solutions using AWS services. Strong background in Linux system administration with Red Hat certifications and AWS Solution Architect expertise.

Technical Skills

Cloud Platforms: Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP)

Containerization & Orchestration: Docker, Kubernetes

Infrastructure as Code: Terraform, Ansible

CI/CD Tools: Jenkins, GitHub Actions, ArgoCD

Monitoring & Logging: AWS CloudWatch, Prometheus, Grafana

Scripting & Programming: Bash, Python

Education

Warriors to Hi-Tech Associate Degree in DevOps Engineering | Ort Singalovsky | November 2024 - November 2025

Certifications

AWS Certified Solutions Architect - Associate

Red Hat Certified System Administrator

Hashicorp Certified Terraform Associate

Red Hat Certified Engineer

Key Projects

Psychometric essay inspector

Technologies: AWS S3, AWS Lambda, AWS CloudFront, Github Actions, Terraform, OpenRouterAI

Need: Automate and improve the evaluation process of psychometric essays for faster, cheaper and more consistent feedback.

Solution: I deployed a scalable, serverless architecture on AWS, leveraging Infrastructure as Code (IaC) for reliable performance. This architecture powered a web application I developed, which uses Deepseek AI models to evaluate and analyze psychometric essays, achieving a 100% reduction in cost and a 99% increase in speed.

Telegram Bot for videos summary

Technologies: AWS S3, AWS Lambda, AWS Rekognition, AWS Comprehend, AWS Transcribe, Github Actions, Terraform, Telegram Bot API.

Need: Reduce the time and effort required for users to consume and understand lengthy video content by providing on-demand summaries within Telegram.

Solution: I implemented a cost-efficient, fully automated serverless pipeline via GitHub Actions and Terraform. This solution powered a Telegram bot that accepts video uploads, extracts audio, transcribes and summarizes content using AWS ML services, resulting in a 90% reduction in time and effort.
